Miller® SkyORB™ Overhead Rotational Boom Anchor

- Convenient and cost-effective, the system uses the vehicle's own weight to secure the anchor for proper fall arrest, eliminating the need for heavy and bulky counter weights
- Provides the worker with an easy and quick connection with their fall arrest system while working at heights
- At 1,050 lb (476 kg) it is significantly lighter than competitive systems, making it more versatile
- Modular design that is easy to assemble and transport only using a forklift
- The telescoping mast allows the height of the system to be adjusted from 14 to 20 ft (4.27 to 6 m)
- Rotating 360° boom can be easily positioned above the worker's head, minimizing free-fall distance and swing fall
- Patented energy absorbing technology reduces forces on the system
